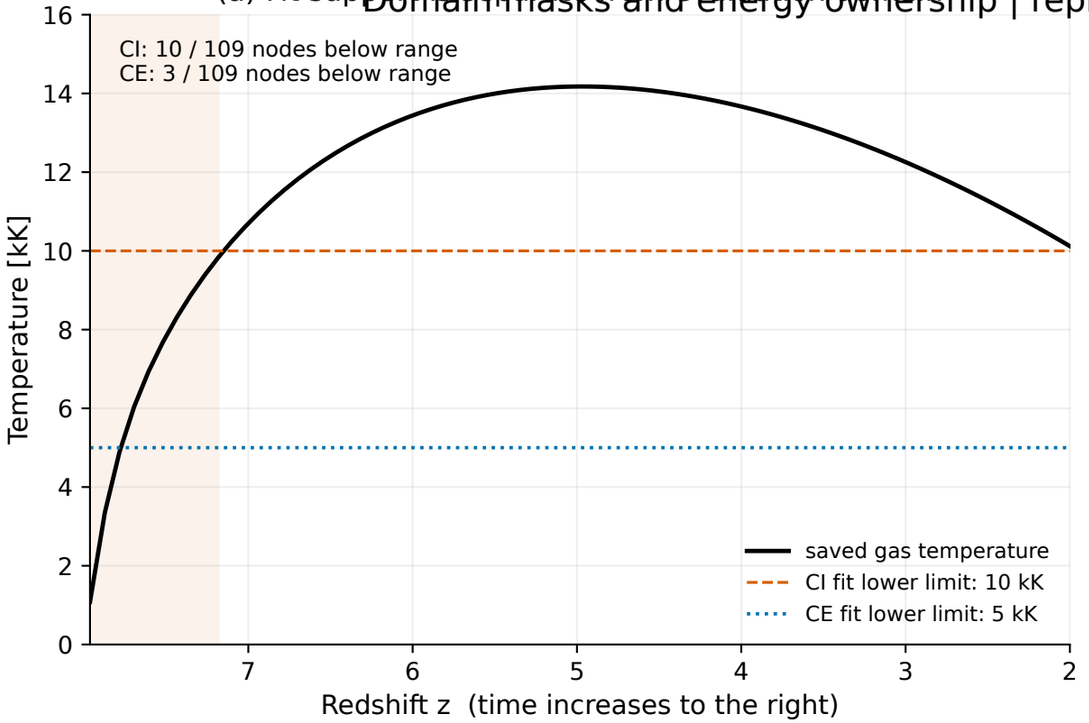
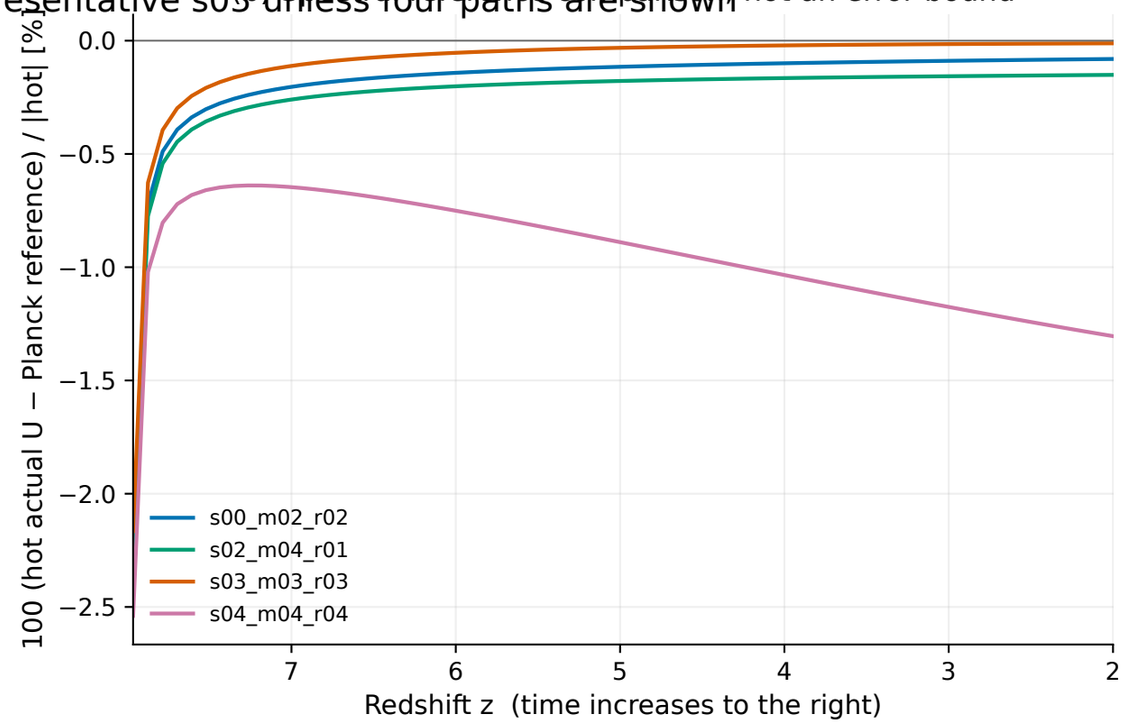
Domain masks and energy ownership | representative s05 unless four paths are shown

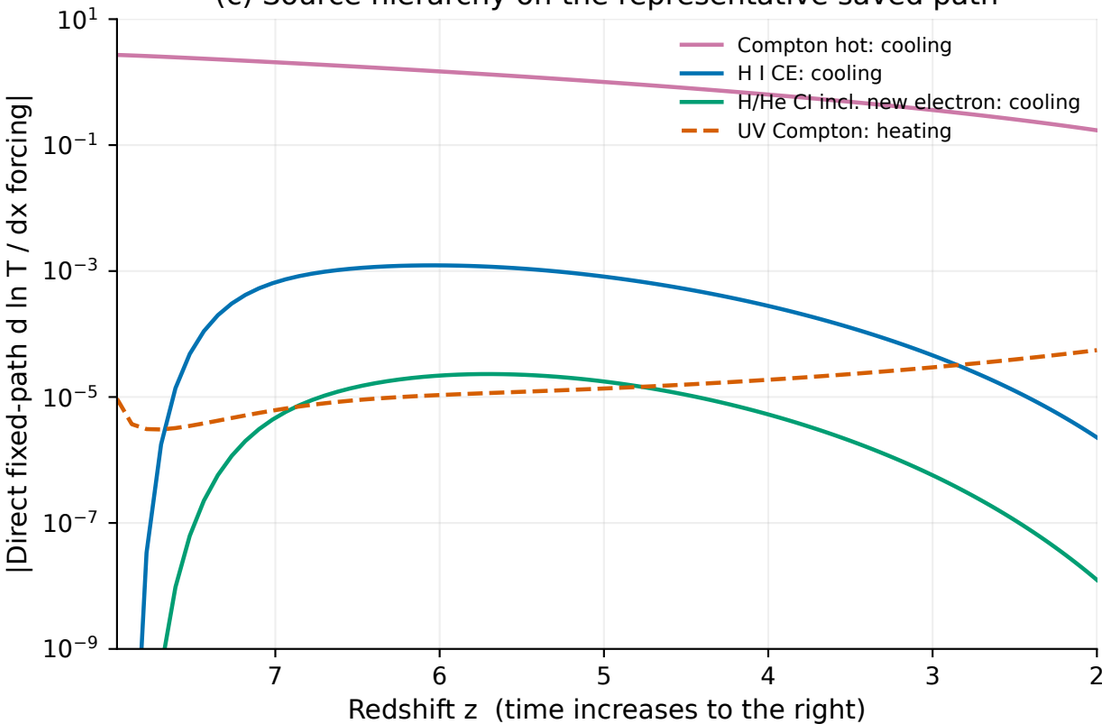
(a) Fit support is separate from evaluation domain



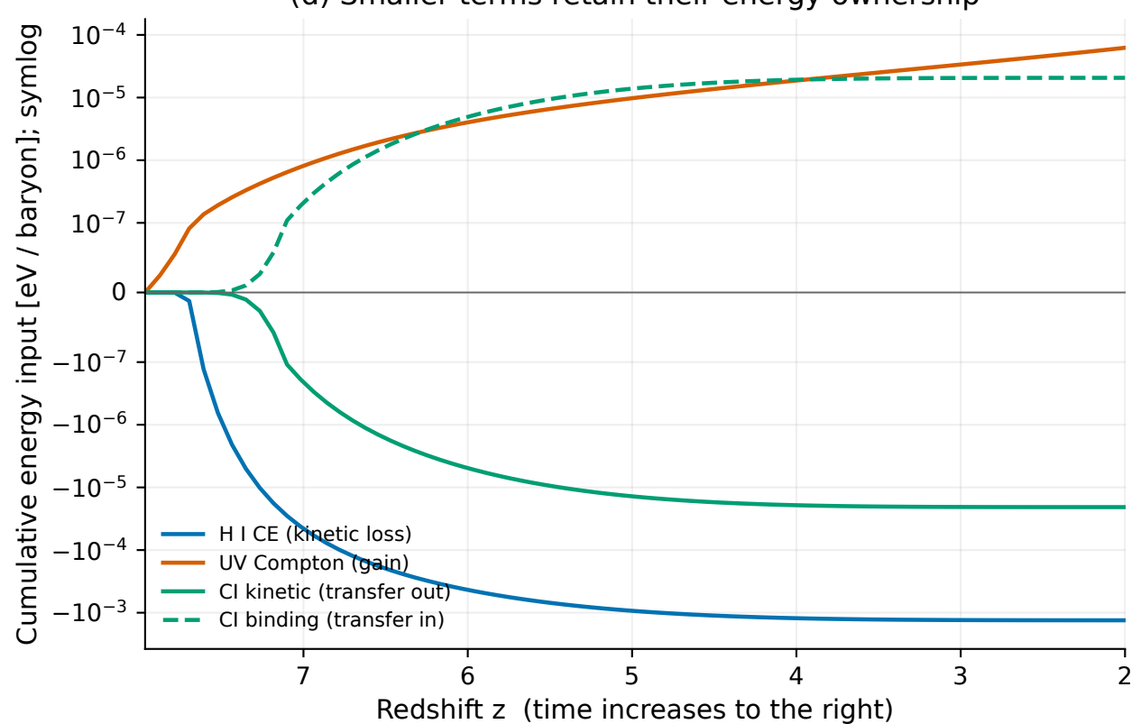
(b) Spectral reference comparison; not an error bound



(c) Source hierarchy on the representative saved path



(d) Smaller terms retain their energy ownership



Below-range fit values are labeled analytic continuations. Supported intervals require both endpoints in range.
Panel (c) shows magnitudes above its displayed floor; all signed values remain in the source arrays. No solved ΔT is plotted.
