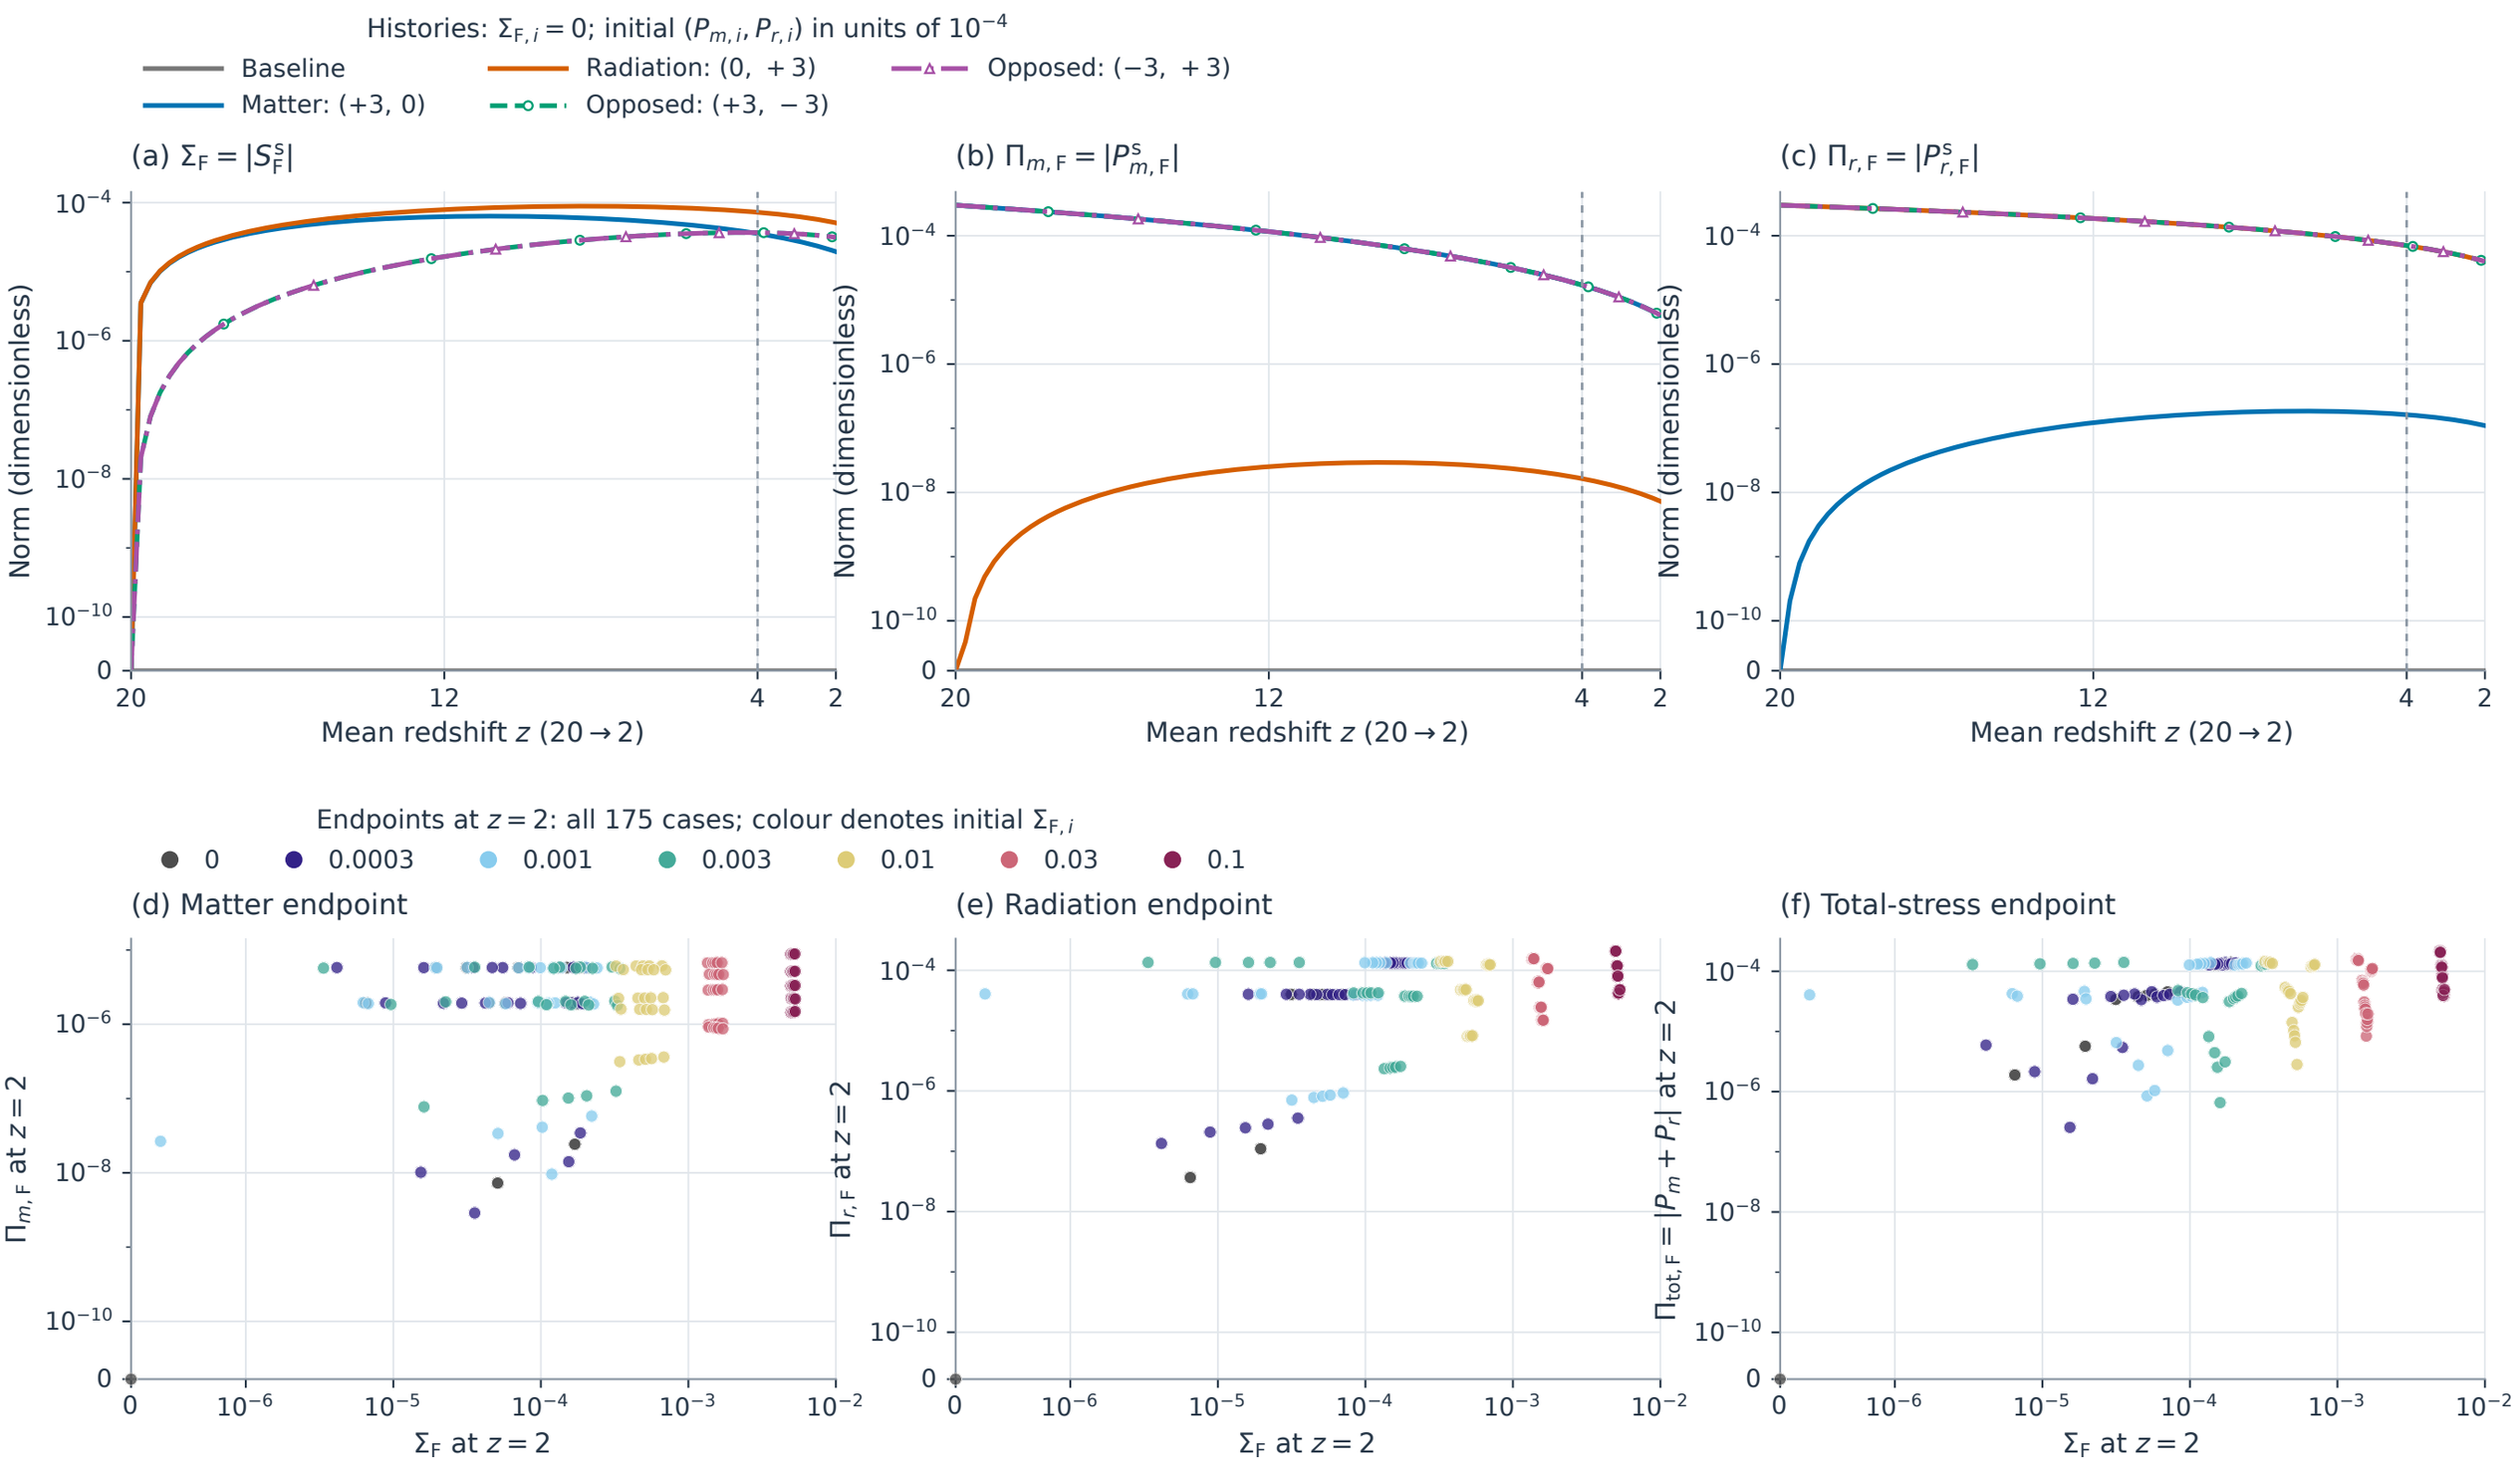
# LRS Bianchi I pilot: shear and stress norms

Non-tilted | collisionless, fixed L=8 | full Frobenius normalization | preliminary stored trajectories



Norm axes use symlog: linear near zero, logarithmic above. Thresholds: y=$10^{-10}$; endpoint Sigma x=$10^{-6}$. No floor or jitter.
Overlaps are retained; total stress uses the signed sum before its norm. Source: REI PR147 3b85dedce84d, stored Lane B; no new ODE.
Comparisons use common mean redshift, with case-dependent proper time. Dashed line: z=4 continuation join. Physical admission remains HOLD.
