RR kinetic-energy factors: source sensitivity at unchanged number rates
Shading: inherited 100–12000 K bath range; dots: source table, no refit
H II → H I
He II → He I
He III → He II
Li II → Li I
Li III → Li II
Li IV → Li III
$f = L_{RR}/(k_B T \alpha_{RR})$
Temperature [K]
Mao factor
Rate derivative
Published rounded table
max |derivative/Mao − 1| = 0.71%
max |derivative/Mao − 1| = 12.86%
max |derivative/Mao − 1| = 0.59%
max |derivative/Mao − 1| = 14.31%
max |derivative/Mao − 1| = 5.26%
max |derivative/Mao − 1| = 1.26%
